MY LIFE PHILOSOPHY

A code review a day keeps the bugs away.

SUMMARY

I am a highly motivated and detail-oriented Software Engineering student with a strong passion for developing software solutions. I possess practical experience in Java, C#, C, HTML, and CSS, applying software development principles to create dynamic and responsive applications. Seeking a Software Engineer Intern position to leverage my technical skills, collaborate on innovative projects with a talented team, and further expand my knowledge in a professional environment. Committed to continuous learning and eager to contribute to impactful software solutions.

EXPERIENCE

As a Software Engineering student, I've developed and tested software solutions using Java Spring, achieving significant performance optimizations and implementing new features. I collaborated with a team of engineers to enhance code quality through rigorous code reviews.

I have hands-on experience developing applications using Unity. I've applied Unity's powerful features to create interactive and engaging experiences, leveraging C# for scripting and implementing various gameplay mechanics and user interfaces. My work includes optimizing performance, integrating assets, and ensuring compatibility across different platforms, contributing to the seamless deployment of applications.

During my journey with HTML, I've learned that it serves as the backbone of web development. It's not a programming language per se; rather, it's a markup language that structures content on web pages.
